**Product Description:**
Current’s Lumination® LPL Series Recessed LED Luminaires are a value product for commercial ceilings providing uniformity, efficiency and reduced glare for T-grid ceiling applications. For the premium TriGain® Architectural flat panel design, please see details for the LET series. The LPL lumens maintenance of greater than L70 at 50,000 hours operation, allows for lower maintenance costs. It is suitable for indoor general lighting for both new construction and retrofit when luminaires are being replaced. The uniform light across the diffuser offers a distinctive, better look than traditional LED “two strip troffers”. End users can see the difference and enjoy the fresh new look of an LED luminaire.

  - **Daintree One:** Wireless fixture integrated sensor that is perfect for single fixtures or small area applications. Standalone wireless lighting controls that work independently. Comes preset from the factory, yet can be upgraded to Daintree EZ Connect and/or Daintree Enterprise in the future. Factory preset to shut off 20 minutes after the space is vacated of occupants. Daylight harvesting preset enabled on.
  - **Daintree EZ Connect:** Wireless fixture integrated sensor that is designed for room based controls where a group of fixtures communicate to each other and communicate wirelessly in chorus as a system. The advantage is simple, minimal field based commissioning. Factory preset to shut off 20 minutes after the space is vacated of occupants. Daylight harvesting is set in initial preset. EZ Connect wireless lighting controls are set up and/or can be changed by the Daintree EZ Connect application that can be downloaded via an iOS smart device.
  - **Daintree Enterprise:** Wireless fixture integrated sensor technology that is ideal for multi-site lighting system management. System requires software and commissioning. Monitor multiple controls, lighting, energy, HVAC with unlimited potential for other (3rd party) sensor integration. *Open on the bottom* means that ZigBee communication protocol is an industry standard with countless wireless hardware sensing options. *Open on the top* means that the data from the sensors can be used by any 3rd party software supplier/developer, be it part of a complete BMS system or simple API (Application Programming Interface or “App”). Daintree Enterprise offers a complete future proof solution from any Daintree enabled installed base of fixtures.
